**Coakley Landfill, North Hampton, NH:** On January 18, EPA sent a letter to the Coakley Landfill Group (CLG) requesting that it initiate a bedrock investigation. On January 24, EPA and NHDES met with Peter Britz of the CLG to discuss the request for the bedrock investigation. Peter Britz reported that the CLG had provided the request to its consultant and that they were developing a plan and schedule for submitting a work plan. On February 16, the CLG submitted a proposal to EPA and NHDES for them to review and compile existing data and information and to use this data and information to inform the bedrock investigation, as requested by EPA. Following this data review, the CLG will submit a more detailed work plan for the bedrock investigation by March 21. A technical meeting will then be convened to review the details of the work plan. In the meantime, the CLG has submitted data related to the investigation of an existing bedrock borehole, the Chinburg well. Recent sampling of fracture zones within this well were non-detect for both 1,4 dioxane and PFAS. In accordance with the state Groundwater Management Plan, the CLG will now go forward with the establishment of two new bedrock boreholes for further defining the site's Groundwater Management Zone. Borehole geophysics and sampling will be conducted on these boreholes. This data and information will also be considered as part of the bedrock investigation. EPA will be briefing Senator Hassan's staff on February 28.
